Projects

API Monitor SaaS — API & Infrastructure Monitoring SaaS

- Built a monitoring platform for APIs, servers, and CDNs to track uptime, response times, and service health.
- Implemented automated incident detection and notifications through email and Discord webhooks, allowing users to receive alerts without manual monitoring.
- Developed the monitoring backend and real-time dashboard for service performance and availability.
- Designed automated monitoring routines and event-driven alert workflows for detected incidents.

ft_transcendence — Real-Time Multiplayer Platform

- Developed a full-stack multiplayer platform with authentication, matchmaking, real-time games, chat, friends, notifications, tournaments, and dashboards.
- Developed backend APIs and real-time features using Fastify, WebSockets, and Redis, with event-driven notifications across the platform.
- Implemented an AI-powered opponent bot capable of analyzing game states and making real-time decisions during matches.
- Integrated blockchain smart contracts to validate tournament results and containerized the application with Docker for reproducible development and deployment.
- Stack: Next.js, TypeScript, Fastify, WebSockets, Redis, SQLite, Solidity, Docker, Nginx

Intelligent Email Assistant — AI Email Automation

- Built an AI-driven email automation pipeline using n8n and OpenAI/Anthropic APIs to classify incoming emails and generate contextual draft replies.
- Designed a multi-stage workflow integrating Gmail API, LLM-based classification, conditional routing, and Discord notifications to process emails and identify urgent messages in real time.
- Implemented automated email categorization, response generation, and correspondence logging, reducing manual email triage through workflow automation.
- Applied prompt engineering, API integration, conditional workflow logic, and low-code automation across email, messaging, and data services.

Movie Recognizer — AI-Powered Movie Identification App

- Built an AI-powered application that identifies movies from images, video clips, or text, using Google Gemini for AI-based recognition and the OMDb API for enriched movie information.
- Developed a Fastify backend with protected AI endpoints, keeping API keys and AI processing securely server-side.
- Integrated AI recognition into a credit-based system with subscription options, alongside watchlists, ratings, watched status, and Google Sign-In.
- Added image and video compression to optimize uploads and improve AI recognition performance.

EDUCATION

1337 CODING SCHOOL — 42 NETWORK

2023 – PRESENT

Project-based Computer Science curriculum focused on algorithms, systems programming, networking, graphics programming, software engineering, and full-stack development, emphasizing problem-solving and peer-to-peer learning

ISTA ISGI, KHOURIBGA

2021 – 2023

Full Stack Web Development Diploma: Coursework included programming fundamentals, algorithms and data structures, Python development, database systems, modern frontend and backend technologies, and agile project management and software delivery methodologies.

SKILLS AND EXPERTISE

Languages: C,C++,JavaScript, TypeScript, Python

AI & Automation: n8n, OpenAI API, Anthropic API, Google Gemini, Prompt Engineering, AI Workflows, API Integration, Rag pipelines, Workflow Automation

Frameworks: Next.js, React, NestJS, Fastify, Flutter

Databases: PostgreSQL, MySQL, MongoDB, SQLite, Redis

Backend & APIs: REST APIs, JWT, Authentication & Authorization, WebSockets

DevOps & Cloud: Linux, Docker, Docker Compose, Nginx, Git, CI/CD, Azure, AWS

LANGUAGES

Arabic: Native | **English:** Advanced (C1) | **French:** Intermediate (B2)
