EDUCATION

2023 – PRESENT

1337 CODING SCHOOL — 42 NETWORK

Computer science curriculum covering algorithms, systems programming, networking, graphics programming, software engineering, and full-stack development through hands-on projects and peer-to-peer learning.

2021 – 2023

ISTA ISGI, KHOURIBGA

Full Stack Web Development Diploma (Bac+2): Coursework included programming fundamentals, algorithms and data structures, Python development, database systems, modern frontend and backend technologies, and agile project management and software delivery methodologies.

Projects

Api Watch: Monitoring platform for APIs, servers, and CDNs, featuring uptime and response times tracking, incident detection, and automated email/Discord alerts. Built with Next.js, NestJS, PostgreSQL, and designed to provide real time visibility into service health and performance.

ft_transcendence: Full-stack Pong web application built with Next.js and Fastify. Developed backend APIs, interactive dashboards, authentication, and real-time multiplayer features using WebSockets, with blockchain based validation for tournaments records.

ft_irc: Internet relay chat server supporting multiple clients, channels, operators, real-time messaging via non-blocking I/O, and FTP, Built with C++.

1337 Vacations: responsive vacation management front-end for 1337 school students using React.js, allowing users to browse and manage vacation-related information through an intuitive and user-friendly interface.

Minishell: Built a fully functional POSIX-compliant shell built from scratch. Implements lexing, parsing, heredocs, pipes, redirections, signals, and built-in commands, built in C.

Cub3D: 3D raycasting game, built from scratch with C and Mlx library, Features textured walls, sprites, rendering calculations, and collision systems.

Inception: Designed and deployed a multi-container infrastructure using Docker, configuring and managing interconnected services.

Movie Finder: AI-powered mobile application built with Flutter that helps users identify movies from images, video clips, or text descriptions. Developed an API backend to securely process requests and integrate AI models while keeping sensitive API keys protected.

SKILLS AND EXPERTISE

Programming Languages: C, C++, Javascript, TypeScript.

Frameworks: NextJs, NestJs, Fastify

Databases: Mysql, postgres, MongoDB

Systems & Networking and tools: Linux, Docker, Git, networking fundamentals, low-level knowledge (process & memory management, system and multi-threading programming).

AI-Assisted Development & Agentic Workflows: Claude Code, Cursor, AI coding agents, BMAD Method, and structured workflows for planning, implementation, and iterative development.

LANGUAGES

Arabic: Native | **English:** Advanced (C1) | **French:** Intermediate (B2)
