EDUCATION

1337 CODING SCHOOL, KHOURIBGA

NOV 2023 – PRESENT

42 curriculum covering algorithms, systems programming, networking, graphics programming, software engineering, and full-stack development through hands-on projects and peer-to-peer learning.

Key Projects:

- **ft_transcendence** – Full-stack Pong web application built with Next.js and Fastify. Developed backend APIs, interactive dashboards, real-time features using WebSockets, authentication, and blockchain-based data validation.
- **ft_irc** – Developed an IRC server in C++ with support for multiple clients, channels, authentication, and non-blocking socket communication.
- **Minishell** – Built a Unix shell in C, implementing command execution, pipes, redirections, environment variables, signals, and built-in commands.
- **Cub3D** – Developed a 3D graphics engine in C using raycasting techniques, including textured walls, player movement, and map parsing.
- **Inception** – Designed and deployed a multi-container infrastructure using Docker, configuring and managing interconnected services.
- **push_swap** – Implemented and optimized sorting algorithms under strict operation constraints, focusing on algorithmic efficiency and complexity analysis.

ISTA ISGI, KHOURIBGA

OCT 2021 – JUL 2023

Full Stack Web Development Diploma (Bac+2): Coursework included programming fundamentals, algorithms and data structures, Python development, database systems, modern frontend and backend technologies, and agile project management and software delivery methodologies.

key Project: Built a complete marketplace-style web app with user accounts, CRUD operations, and a mobile-friendly layout.

SKILLS AND EXPERTISE

Programming & Languages:

C, C++, TypeScript, JavaScript, SQL

Frontend Development:

React, Next.js, Tailwind CSS, data visualization (graphs, charts), responsive UI design

Backend Development:

Node.js, Fastify, Nest, REST API development, WebSockets, authentication, role-based access control, secure API design

Database & Data Management:

MySQL, MongoDB, database schema design, query optimization, data fetching & processing

System & Networking:

Linux, Docker, networking fundamentals, process & memory management, system programming, signal handling

Tools & Workflow:

Git, GitHub, VS Code, peer code reviews, collaborative development

LANGUAGES

Arabic: Native | **English:** Advanced (C1) | **French:** Intermediate (B2)
